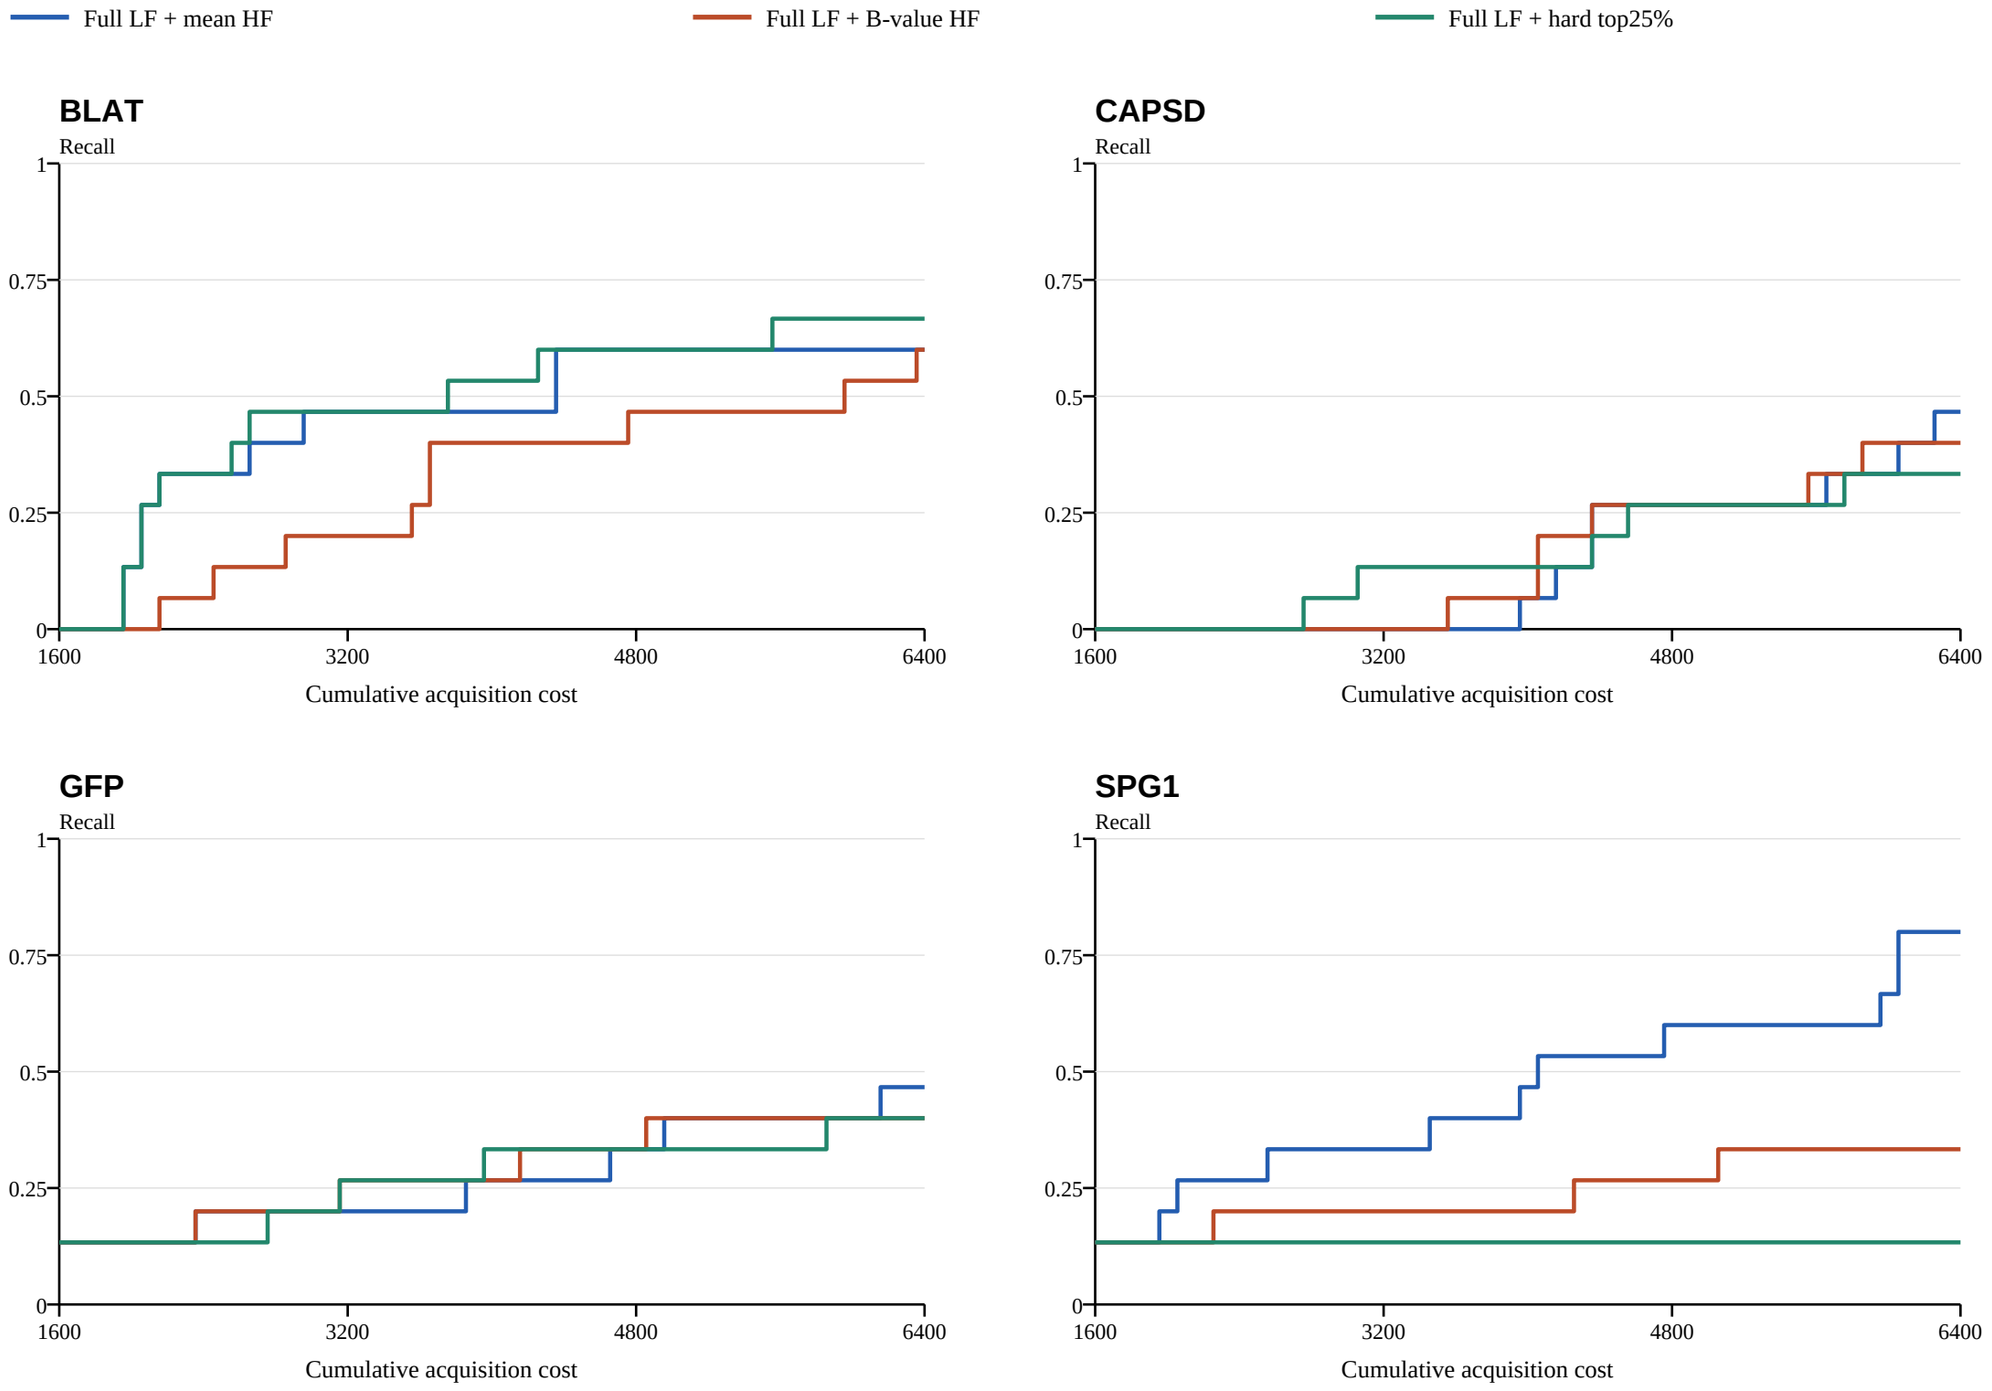
M6 real-proxy bridge: shared information and HF opportunities

Real ESM1v, original RF; 16 initial HF + all 256 LF; 45 subsequent HF purchases in every arm.

Top 1% recall; four known development pools, 256 candidates per assay, five paired seeds.



Means of five complete trajectories. Hard25 reuses the matching E5 runs; each arm spends 6356 of a 6400 cap.

Costs are assumed purchase units. These are within-panel policy effects, not unseen-assay confirmation.
